THIS ROCK HOLDS VERY MUCH GOLD

Manager Saxman of Yampa Company Brings Fine Ore From California.

SUCH STUFF MAKES GREAT STAMPEDES

Self and Associates Have Stamp Mill Turning Out Good Profits.

When a person beholds a bunch of quartz as hig as his two fists, which, when broken, is transformed into a soild mass of writing wire gold, he appreciates the feelings of the old-timers who braved the dangers of mountain and desert to reach the locality from which such rock came. California produces the most beautiful gold of the world, and C. W. Saxman, general manager of the Tintic Mining and Development com-Yampa, has such a bunch of yellow metal wealth on his deak from this State.

wealth on his desk from this State.

Mr. Saxman returned Monday from a trip to the West and Northwest. On his way to Salt Lake he stopped over in Sierra county for the purpose of inspecting a gold property in which he and Eastern people are interested. He brought back with him some of the handsomest specimens of gold ore ever found anywhere, but he acknowledged that such bonanza specimen or occurs only in bunches throughout the ledge. The ledge itself is eight feet in width, the present workings having 600 feet of backs. The owners have a twenty-stamp mill at work grinding on rock that is allowing a very comfortable profit, the whole ledge being milling ore. The property is located in the Mother Lode zone of the State, and all the inhabitants of that section, states Mr. Saxman, are either forty-niners or native sons.

Mr. Saxman, are either forty-niners or native sons.

While in Aliska Mr. Saxman inspected the Brittanis property on the Prince of Wales Island. The company is working on a small scale now, but when the snows are gone the whole section will wake from its usual winter's sleep and get flown to hard work for the season. All the sawmills and like industries of the region are being limbered up for action. Mr. Saxman brings some very handsome copper ore from the Brittania also.

He stated vesterday that he had not been in Zion iong enough to get in touch with Yampa affairs, but from what he has heard everything is moving along smooth-

heard everything is moving along smooth-ity. He will be in Salt Lake for two weeks, then will visit some Mexican prop-erties of his company.

LUDWIG ORE BODIES GENEROUS IN SIZE

The Yerington Times recently had an interesting account of the Ludwig mine of Yerington, the property of the Nevada Souglas company. In part, this paper

Douglas company. In part, this paper mays:

In the drifts from the 500 level there is nothing but ore, some, of course, richer than others, but ore no matter where you turn. Take your pick and sink it into the floor of any drift and it encounters ore. It was on the 550-foot level where the large body of calcocite was broken into carrying values up to 50 per cent copper. This body might be termed a block of ore running into the carth. It is thirty feet wide and lodged with it is mative copper. It has been shown up on the 650 level, as have all the ore bodies which occur on the upper levels. The Ludwig is, therefore, in all reality one of the greatest copper mines in the known world.

There are evidences beneath the sur-

cent copper. This bedy might be termed a block of ore running into the earth, it is thrity feet wide and lodged with it is native copper. It has been shown up on the \$50 level, as have all the ore bodies which occur on the upper levels. The Ludwig is, therefore, in all reality one of the greatest copper mines in the imown world.

There are evidences beneath the surface in the Ludwig which show that some men are too easily discouraged in the serior instance, a fault occurred. Instead of passing through it, the former owners gave up the ghost and diverted their aisention to another locality. Mr. Arentz, of the Douglas company, went through the fault bere, another ore body was shoountered; in fact, there were two, one a sulphide and the other a carbonale. This drift is particularly furpressive; on one size of the drift the wall glistens diamond-like with the sulphide, while the other is beautifully resplendent with its sarbonate.

But it is not necessary for one to go underground in the Ludwig to realize that it is a great mine. Stand at the copper with the sulphide, while the other is beautifully resplendent with its sarbonate.

But it is not necessary for one to go underground in the Ludwig to realize that it is a great mine. Stand at the copper is a stand at the core is a carbonate. This drift is particularly furpressive; on one size of the drift the wall glistens diamond-like with the sulphide, while the other is beautifully resplendent with its sarbonate.

But it is not necessary for one to go underground in the Ludwig to realize that it is a great mine. Stand at the core is a standard to the core is a standard to the large in the core is a standard to the large in the core is a standard to the

with the suiphides, while the other is beautifully resplendent with its carbonates.

But it is not necessary for one to go underground in the Ludwig to realize that it is a great mine. Stand at the office building and you can see nothing but ore being raised to the surface. It is a fact that the waste dump is small compared with the dumps of one. In the three bins there are tone of ore that will average better than 30 per cent. There is what is called the sulphide dump, where the sulphide ores are placed, and another one where nothing but carbonates repose, awaiting treatment.

There is nothing lost at the Ludwig The very water is used, into the liquid in is placed, and the result is that the tin is eaten and almost pure copper remains. It is, without question or argument, one of the greatest mines in the world, and Yerington is justified in claiming for itself a property that alone has more one in sight than any other mine in the State, with the possible exception of the Bluestone, another Yerington property.

RUMORS OF DISCOVERY ON THE SILVER KING

There was a persistent rumor Monday in local circles that the Silver King Coalition Mines properties at Park City and been the scene of a very fine strike of new ore. Owing to the absence from this city of President Keith and Manager Kearns, no confirmation of the find could be had. Those familiar with the properties of the Silver King Coalition think that the find is one of several this company is bringing to bent and that improvements in the ore showings are so generous and steady what the usual term "strike" hardly is applicable to the discoveries being made.

Juab Oil Company

Will be actively drilling for oil on their patented land, 1200 feet from Junb station on Salt Lake Route, with Junb station on Salt Lake Route, with in thirty days, and guarantee me shares after that da(e will be offered for less than 50 couts. The first allotment is now ofered to investors at 10 cents a share. Remit to Junb Oil company, 217 Herald building. For prespectus apply or write J. M. Evans, under Descret National bank. Telephones; Bell 2277; Independent 827.

GOLD-SILVER BRICK FROM JENNIE MILL

Every Other Day Management Has Valuable Clean-Up at New Plant.

Although the market on the local exchange Monday was absolutely lacking in enthusiasm, there apparently was no let-up in the amount of business trains acted. During the day a total of 120,889 shares of stock passed hands, having a market value of \$50,809.27. The following were the unlisted and listed stock quotations: J. A. Kerns of the Jennie Gold Mines Monday with a gold and silver brick from EXPERTS SAY OIL be recovered, and when the entire battery of twelve Nissen stamps are dropping which will not be long, the company will be turning out a brick each day valued at not less than \$1000.

Mr. Kerns points out a significant item in that the gold values of the present main level, the 175, have doubled over those of the level above, while the continuous drifting on the 175 level shows that there is a decided improvement in extent of resources as well. The mill is doing its work like a veteran, and Mr. Kerns states that it is one of the best and most complete plants for its size in the State. Such a brick as the one above mentioned is produced now at half capacity every other day. tery of twelve Nissen stamps are drop-

REXALL TUNNEL NOW IN INTERESTING GROUND

Word from the Rexall Mining company's property at Alia is of the most encouraging character. The company during the winter months has been driving a long tunnel from the Big Cottonwood side, so as to drain as well as develop of the veins at greater depth than by way of the old workings. This tunnel is fast approaching the main system of veins, for the face is continually breaking into highly mineralized matter, in which there are good traces of silver and lead. Let al officials deem the tunnel in very interesting ground, and expect good tagers from now or until the main point has been continued to the main to the most of the most of

ANOTHER WELL IS THROWING UP GAS

Cedar City Oil Company Is Third Company to Find Gas at Depth.

LAKE IS BENEATH

Significant Find Is Made in Interesting Oil Field of This State.

That the Virgin river oil field eventually will be so explored that a great oil lake will be found at good depths is one of the pet theories of the experts who have given that section the benefit who have given that section the benefit of their investigation. The finding of gas in large quantities in both the Bonneau and the Martin wells was instanced as two good reasons why an oil lake existed. Monday afternoon, H. H. Clark of the Southern Utah Oil company received a message from his partner, Dr. Benson, that the Cedar City Oil company has likewise encountered a great flow of gas.

pany has likewise encountered a great flow of gas.

Mr. Clark was in A position to enjoy this news, for the reason that the Cedar City property adjoins the Southern Utah property, a Salt Lake and Nevada proposition, on the north. The Bonneau well likewise adjoins the Southern Utah, being on the south, and Mr. Clark is all the more positive now that he will find equal results when he can get the Southern Utah wells down according to present plans.

Utah wells down according to present plans.

Dr. Benson did not give any more facts in his message than that the flow of gas was strong, that it was encountered Sunday evening, and that it came from a depth of 900 feet.

"In my judgment," stated Mr. Clark Monday, "the presence of this gas demonstrates the existence at better depth of an oil lake. And everyone knows what will happen when this oil lake is tapped. It will take a great flow of oil to convince the world that the Virgin field is worthy of their fullest confidence, and as for myself I have no foar of the results."

suits."

With the coming on of spring weather, and the loosening up of the financial stringency, many Virgin companies now idle will be started up in the old-form fashion, and the coming summer should be full of good things for this new oll region of Utah.

TINTIC WORK FULL OF GREAT INTEREST

It is a matter of some satisfaction to these columns that the recent predictions on this page regarding the southern end of the Tintle section are now taken much as a matter of course. Some months ago the question was widely mooted regarding the southern extension of the famous Colorado ore body, both the Crown Point and the Sioux Consolidated companies being of the orinion, apparently, that they would secure the same to the south.

On the southern end of the Colorado is the great east and west quartz ledge which has been the subject of considerable examination and thought on the part of the Government experts. As pointed out in these columns, this ledge has occasioned a great fault in the Colorado shoot, the extent of this fault determining which property or proporties farther south will secure the extension of the ore. In the absence of faulting the Sloux Consolidated company stands a very good show of securing the ore, but the Crown Point property stands a chance to get it if the faulting was done to the logical point east of the place where the quartz cuts the ore body itself.

Another interesting matter to be taken into consideration, also recently explained in these columns, is that if the quartz ledge itself is a minerallizing agent, then all the southern portion of the section in question will stand an excellent apportunity of finding ore bodies. There are those who believe this quartz ledge is itself a minerallizing agent, and that the Crown Point. Sioux Consolidated, iron Blossom and others in their vicinity will develop independent shoots of ore by virtue of this fact, this section becoming one of the most productive of all the Tintic section.

It is gratifying to note that considerable development work is being done now to determine these interesting matters, and much is expected from the same.

SALT LAKE COPPER COMPANY GETS RESULTS

Not far from the Nevada-Utah line, in Box Elder county, Utah, is a property known as the Salt Lake Copper company's ground, that has attracted practically no attention at all in Utah or Nevada circles. The owners are conservative Eastern people who have added a splendid equipment to their proposition, have sounded very gratifying depths, and who have exposed a fine lot of rich copper ore without letting the world know much about their successes or plans. Last season this company was one of the big producers of the State, sending in an average of four cars of ore daily during the shipping season, so it is stated, and with a mountain of ore left with which to look forward for a long life of usefulness. The company has constructed a long trainway to bring the ores down to the upper terminal of the branch railroad line. Attention in a quiet way was called to this company a week or two ago by the announcement litat Manager McCaffrey had resigned to assume the responsibilities incident to the effice of metallurgical superintendent of the Knight Smelting company at Tintic. VETERAN MINER ON THE RAWHIDE CAMP

Believes Veins Now Opened as Not in Place, but in Overflow.

"While I have no disposition to knock the new district of Rawhide, I believe at the same time that It is a trifle too early to indulge in any extensive predictions. I cannot see beneath the surface any more than the ordinary man, although I have been mining for the past fifty years. It seems to me, however, that all the present shafts in the district are still in a sort of overflow, for none of the so-called veins have been found in

the so-called veins have been found in place."

So spoke John A. Steel of Ely Monday morning. Mr. Steel has just completed a trip across Nevada to southern California and is now on his way to Ely. He has what is considered just as good a prospect at Eawhide as any in the whole camp, and he displays some very handsome but small samples of free gold ore from his group. The gold is of that strikingly beautiful color that characterized the California gold in the early days. He continued:

"These veins are gash veins, small in size, and not overly abundant in number. The ore occurs in bunches, and some of this ore is good rock too. The district is staked off for about ten square miles, and some locations are plastered saveral deep. This will give rise to litigation in time, as there is a certain class who wilfully locate over the first man, hoping to sell his location monuments.

"The people of the camp get their drinking water from a spring about eleven miles away, while the wood for the district is bauled from the famous old La Platte section, nine miles away. I think the chances are good for a few mines to be made at Rawhide when work gets deep, but until that development has been done I believe it a bit too early to say too much about the camp."

Mining Gossip.

James A. Pollock & Co. bankers and brokers, 6 West Second South street, furnish the following, received over their private kire yeaterday afternoon.

New York wires: A representative of the United States Reduction and Refining company says: "Directors have not yetheld their quarterly meeting, due at this time, but when they do they will unquestionably take no action on dividend, which was passed six months ago."

New York—The directors of Utah Consolidated Copper Mining company will

"'Tis Better To Be Sure Than Sorry."

That old saying applies particularly to the care of your val-Our massive Safety Deposit Vaults are protected by the most modern electric burglar alarm system, lined with fire-proof steel, defended by huge doors fitted with time locks and guarded night and day by special watchmen.

Could you ask better protection for your valuables—your papers, honds, notes, stock certificates, insurance policies, jewels, silverware?

cls, silverware?

The annual rental of Safety Deposit Boxes ranges from \$3.50 upward, according to the size. The smallest boxes will care for the papers of the average family.

You will find that the relief from worry and the sense of security that a Safety Deposit Box brings is worth many

times its cost.

We do not suggest a Safety Deposit Box for the storing of cash, simply because you lose four cents a year on every idle dollar you store. Your money is nate and accure in our savings department, and it draws 4 per cent interest compounded semi-annually.

meet within a very few days. There is good reason to believe that they will act on the dividend at that time and will deciare the same rate namely, 56 cents, as they declared at last dividend meet-

New York Letter.

New York Letter.

James A. Pollock & Co., bankers and brokers, 6 West Second South street, furnish the following, received over their private wire yesterday afternoon:

Walker Bros. Stock Letter—New York—Today's stock market was strong and the short covering heavy. The strength in the Steel issues had a very good effect generally. Traders were responsible for the bidding up, but the market looked better than it has for a long time. We expect to see the advance go further, as sentiment at present is quite bullish. We must bear in mind, however, that the public is not the buying power.

No Place for Workmen.

No Place for Workmen.

A correspondent in Rawhide writes to ask The Tribune to warn miners and carpenters out of work not to come to Rawhide. He points out the high prices of life, and to the fact that there is not enough work for those now seeking it in the new camp. He does this not to knock the district, for he says there is gold in Rawhide hills, but to prevent the unemployed from rushing into greater misery than they suffer elsewhere.

Talisman Assessment.

The Talisman Mining company levied assessment No. 1, of 2 cents is share. The same is payable on Mar 21, the delinquent sale being on April 8 Ore Shipments.

The Pioneer sampler on Monday re-leased the following number of cars of ore: Utah, 1; Nevada, 1. The Taylor & Brunton company re-leased the following: Utah, 4.

Ore and Bullion. The ore and bullion receipts for Monday, given by McCornick & Co., were as follows: Ore, \$20,000; bullion, \$20,000.

Metal Market. The metal quotations for Monday, posted by McCornick & Co., were as follows: Silver, 55gc; lead, \$2.75; copper cathodes, 12 3-16c.

Mining Notes. President and Manager M. J. McGill of the New York company was in the city from Park City Monday. Col. James K. Hackett of Louisville is in the city, en route home from a visit to Los Angeles.

E. L. Godbe of the Ohlo-Kentucky company is in Los Angeles on mining business.

D. C. Jackling, manager of the Utah Copper company, spent Monday at the mine in Ringham. M. E. Godbe, the well-known electrical engineer, is able to be at his office after a wrestle with the grip.

R. C. Gemmels general superintendent of the Utah Copper company, is in south-ern California on a short vacation.
